TITLE : CONDUCTIVE INK COMPOSITION
RESISTANT TO OIL AND FAT AND
CONTACT MEMBER

ABSTRACT : PURPOSE: To improve the adhesion to an insulating silicone rubber by compounding two specific organopolysiloxanes, organohydrogenpolysiloxanes, platinum or a platinum compd., a particulate conductive carbon, and a solvent.

CONSTITUTION: This conductive ink compsn. contains an organopolysiloxane which has a viscosity at 25°C of 100cSt or higher and at least two alkenyl groups directly bonded to Si atoms in the molecule and in which at least 30% of all the org. groups except the alkenyl groups are Q¹-Rf¹ groups [wherein Rf¹ is a 1-20C perfluoroalkyl (ether) group; and Q¹ is a divalent hydrocarbon group], organohydrogenpolysiloxanes comprising organohydrogenpolysiloxanes of formulae I, II, III, and IV and/or an organohydrogenpolysiloxane of formula V and having at least two Si-H bonds in the molecule, platinum or a platinum compd., a particulate conductive carbon, and a polysiloxane having at least one Si-H bond and an alkoxy group and/or an epoxy group in the molecule.
